

Amendments to the Specification:

Please replace the paragraph on page 15, lines 17-29 with the following amended paragraph:

FIG. 3 shows a logic flow diagram illustrating a routine **300** for sending a pre-selected portion of a document **106** to a mail client **110** or recipient via e-mail. In a conventional electronic mail environment, an e-mail message is sent by a sender to a mailbox on a mail server. A recipient retrieves the e-mail message via a mail client. In step **302**, the routine **300** begins. Step **302** is followed by step **304**, in which the publish engine **102** receives a sender's pre-selected portion of a document **106** from an application program **36**. For example, the publish engine **102** can receive a pre-selected data range in a spreadsheet document from a spreadsheet application program. When a sender operates an input device such as a keyboard **40** or a mouse **42**, the sender generates user input **108** such as a ~~command~~ or command for pre-selecting data in a document **106**. The publish engine **102** receives or detects the pre-selected data in the document **106** from the application program **36**.

Please replace the paragraph on page 19, line 7 with the following amended paragraph:

Step ~~318-320~~ is followed by step ~~320-322~~, in which the routine **300** ends.
